Dear Dr Phillips

has referred you to the Clinical Genetics Unit. You may not have had any contact with a Genetics department before; a leaflet about our service is enclosed.

In order to provide you with the best possible assessment we would be grateful if you would complete and return the forms highlighted below as soon as possible before your appointment:

1. Family History Form – please include as much information as you can
2. Consent form access to medical records to complete and sign
3. Developmental assessment form (attached to the FHF if required)
4. Please provide photographs of you or your child if you are receiving this on their behalf. Any photographs will be stored in the patient's confidential records for use by their genetics consultant to help with diagnosis.

You can send these either via post, using the pre-addressed envelope provided, or by email to the address at the top of this letter. If you would like an electronic version of the forms, please email us at the same address.

If we do not receive the above information from you we may be unable to process this referral for you at this time.

If there are specific circumstances which prevent you from calling to make an appointment or you would like to discuss this referral further you can email us at genetics.info@nhs.net.

Yours sincerely,

A handwritten signature in blue ink, appearing to read 'Martin Loxton', written over a faint, light blue rectangular stamp.

Martin Loxton
